

Student's Life In COVID Pandemic

Samarth Bijjal

(S/o. Dr. Somshekar Bijjal)
9th Standard
KLE's School, Rayapur, Dharwad

In our daily life we are facing a lot of problems, which include even health issues. Minor health issues will not cause much impact as they have proper treatments. The current pandemics like COVID-19 are dangerous as no definite treatment is available and it is causing lots of death and disability. This has destroyed the lives of people in these days. It has affected all ages of population. It has caused significant effect on the economy, education, jobs, housing, social issues and both physical and psychological health problems. Everyone is busy in taking care by staying inside their house, thinking always about the disease.

Student life is a golden life, but due to COVID pandemic, student's life has become very difficult, monotonous and joyless. Schools have closed, with no socialisation, no friends, and no games. They have been struggling hard to find out many things by staying at their home.

There have been many merits and demerits in the student's life during this pandemic.. They have also learnt many things in these COVID-19 situations.

Some of the Advantages are:-

- Students are spending their time with their Family and their neighbourhoods.
- They are spending their time properly by making a time schedule.
- Some of the students are seeing good serials like Mahabharath, Radha Krishna, and Seeteya Rama which are helping the students by teaching them the traditional history, morality and spirituality of their culture.
- Students are able to visualise the problems faced by the parents especially mothers problems in taking care of family and home. And many children have learnt to help their mothers.

Some of the disadvantages are:-

- Students have been using mobile phones a lot these days.
- Students have been sitting in home and are not taking good care of their health.
- They also do not have any physical activities inside their home and as a result are gaining weight.
- There is an increase in boredom among children and lot of quarrels in home among siblings.

Despite all these plus and minuses, I wish to be with the friends in school, I wish to return to school in a safe way, I wish to see the smiling faces on all the citizens of the nation. For this, we need to practice the 3 principles of safe distancing, use of facemasks and frequent washing of hands, till we get a vaccine and proper treatment. Hence, I pray to the almighty to end this pandemic situation as soon as possible.
